

Digital Camera with Detachable Display module

ABSTRACT

The present invention provides a digital camera having a detachable display module such that the display module can be selectively separated from the camera unit of the camera according to usages. In this regard, both the portability and the convenience of usage of the digital camera are enhanced. The digital camera of the present invention comprises: a camera unit for generating and outputting image data; and a display module capable of receiving the image data using a transmission interface and displaying the same; wherein, the display module is detachable from the camera unit.
